

# Critical Connections?

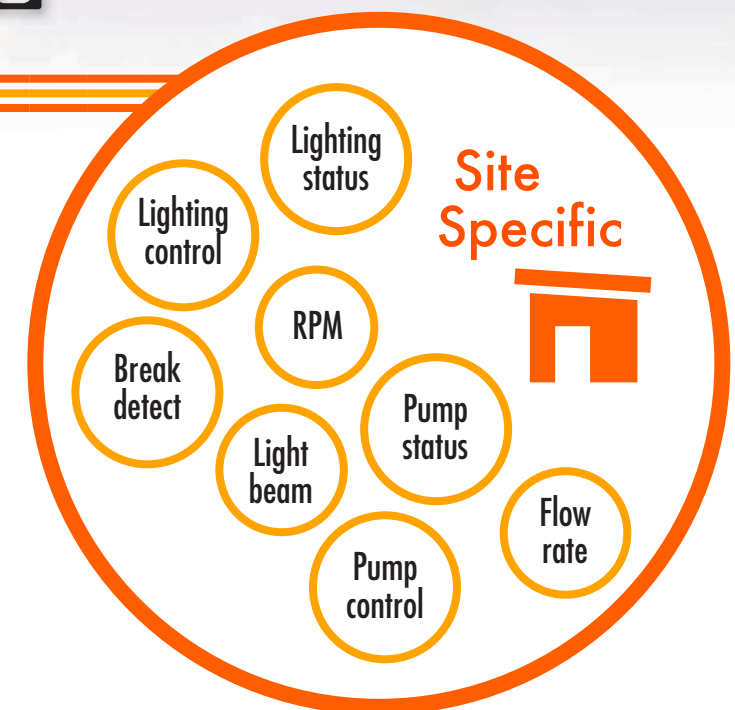

## The internet of **your** things

For many years Communications System architecture has been based on a critical central core of very robust RF infrastructure. In most cases the performance of these systems have been outstanding and failure rates have been extremely low. Careful product selection allows our Industry to stand proud boasting mean time between failure rates that make us the envy of modern industry.

And then when you least expect it ... **Something Fails.**

TASC products exist today and provide standard protocol support like SNMP reporting and network analytics to give you, the operator, incredible control over all facets of your critical connections.

**Cost effective solutions for the total management of the Internet of **your** things.**

**your equipment,  
your connections,  
your infrastructure,  
your network!**
